Anton Shkel

Product Analyst — Intern / Junior · SQL · Python · A/B Testing · Fintech

Moscow anton.shkel06@mail.ru Telegram @antonshkelll github.com/antonshkelll antonshkel.ru

Software Engineering student at the Financial University. I build real products — Telegram bots and Mini Apps for student projects — and measure them. Strengths: **SQL, statistics and A/B testing**, taking a problem from raw data to a decision measured in money.

PROJECTS

SplitLab — product analytics of a Buy Now Pay Later service

SQL (DuckDB) · Python · statsmodels · 2026

- SQL marts over 1M events: rolling-window DAU/WAU/MAU, BNPL funnel, cohort retention, **unit economics by loan vintage** (merchant fee, funding, 90+ DPD losses).
- Measured with **difference-in-differences** what switching off BNPL for carts above 50,000 ₽ cost (the credit-bureau threshold in Federal Law 283-FZ): −32 pp BNPL share, yet 83% of buyers paid another way — true GMV loss 6× smaller than it looked.
- A/B test "installments on the product page": SRM, MDE, CUPED, bootstrap, delta method for FPD30. **+15.1% BNPL conversion (p < 0.001)** with flat guardrails; simulated that daily peeking inflates false positives to 27%.

Uplift modeling on a real randomized experiment with 64,000 customers

scikit-learn · causal ML · 2026

- Validated the experiment (SRM, covariate balance) and measured the e-mail effect: **+7.7 pp visits, +119% purchases**; found a segment with twice the effect.
- Compared S-/T-learners and class transformation over 5 splits (Qini, uplift@k) and evaluated a next-best-offer policy with IPW. Showed that money-based targeting does not pay off at this sample size and sized the test needed.

DropHunter — money-mule detection in P2P transfers

SQL · scikit-learn · 2026

- SQL features over 1.57M transfers: cash-out speed (ASOF JOIN), pass-through ratio, share of new senders; out-of-time validation, fully reproducible results.
- Gradient boosting: **PR-AUC 0.81 vs 0.36 for rules** and **+46% net effect** at the same analyst workload; threshold chosen on money (prevented loss − false blocks − review cost).

Engineering

PyTorch · MCP · GitHub Actions

- **TxGPT** — GPT built from scratch in PyTorch (own BPE, attention, pretraining) for spending categorization, benchmarked against TF-IDF.
- **finpilot** — MCP server for Claude and Cursor: bank statement analytics, subscriptions, unusual charges; tests and CI on Linux and Windows.
- **Market Pulse** — Moscow Exchange dashboard that updates itself every night via GitHub Actions.

EXPERIENCE

Developer — Information Committee, Student Council

2024 — present

Financial University, Faculty of IT and Big Data Analytics · Moscow

- Build Telegram bots for student projects: F&U (4,000-subscriber channel) and "Ask the Student Council" — a bot + Telegram Mini App: requests to faculty leadership, maintenance reports with photos, 27-page searchable FAQ, campus map with search across ~350 rooms.
- Python (aiogram 3, aiohttp), Mini App signature verification (HMAC-SHA256), anti-spam, tests; deployed with nginx, systemd, Docker.
- Added event analytics to the bot (middleware + SQL): DAU/MAU, retention, request funnels, Student Council response time.

Freelance Python Web Developer

2024 — present

- End-to-end websites and web apps: Django/Flask, PostgreSQL, REST APIs. Portfolio site antonshkel.ru: custom lead form, privacy-law compliance, Yandex Metrica, SEO.

Organizing Committee — "Arkadium" Gaming Festival, 200–300 attendees yearly

2024 — present

EDUCATION

Financial University under the Government of the Russian Federation — B.Sc. Software Engineering (09.03.04), 2024–2028. Major: development of information and analytical systems.

T-Education (T-Bank), 2025 — SQL, backend · **Yandex Academy**, 2025 — Python, data analysis and visualization · **Alfa-Bank Hackathons** — online stage, team business cases.

SKILLS

Analytics	product metrics, funnels, cohorts, unit economics; A/B testing (SRM, MDE, CUPED, bootstrap, delta method); difference-in-differences
Data	SQL — PostgreSQL, MySQL, DuckDB, SQLite (window functions, CTEs); Python — pandas, NumPy, SciPy, statsmodels; BI dashboards; Excel / Google Sheets
ML	scikit-learn, gradient boosting, PyTorch (transformers), money-based model evaluation
Engineering	aiogram, Django, Flask, REST API, Docker, nginx, Git
Languages	Russian — native; English — B1
