Anton Shkel

Product Analyst — Intern / Junior · SQL · Python · Kotlin · Fintech

Moscow anton.shkel06@mail.ru Telegram @antonshkelll github.com/antonshkelll antonshkel.ru

Software Engineering student at the Financial University. I build products and measure their economics, from SQL marts and A/B tests to an Android app with payments. Now: product and integrations in team Vibe Security, Alfa-Future Hackathon.

PROJECTS

Vibe Security — Alfa-Future Hackathon 2026

SME credit cabinet · team of 5 · October 2026

- Wrote the spec and built WireMock mocks of the company registry, tax service, credit bureau, bank and SMS for seven test companies, **with latency and failures**, so the demo shows an application going to a manager instead of failing.
- Prepared the team brief and SME lending market research with hypotheses H1–H6, reviewed and fixed the team's scoring model (10 factors, 0–1000 score); own screen and rejection texts, the UX test and the final pitch.

Subly — subscription tracker: Android app and SaaS

Kotlin · Jetpack Compose · Ktor · PostgreSQL · YooKassa · 2026

- Compose app with offline reminders (WorkManager) and a Ktor backend: JWT, rate limits, **Pro payments via YooKassa** with server-side payment verification, admin panel with conversion and revenue.
- Server and screenshot tests in CI, one-click APK releases, one-command VPS deploy (Docker, nginx, Let's Encrypt).

Economics of a fast payment — research on Russia's SBP and the digital ruble

Python · Bank of Russia data · 2026

- Computed the merchant's cost of a payment: a 1,700 ₽ purchase costs **11.90 ₽ via SBP vs 31–52 ₽ by card**; cards would break even at a 0.57% acquiring rate.
- 13 datasets, a tested model, a public calculator at sbp.antonshkel.ru and a 60-slide presentation.

SplitLab — product analytics of a Buy Now Pay Later service

SQL (DuckDB) · Python · statsmodels · 2026

- SQL marts on 1M events: DAU/WAU/MAU, funnel, cohorts, **unit economics by vintage**; difference-in-differences showed the real turnover loss after the 283-FZ threshold was 6× smaller than it looked.
- A/B test (SRM, MDE, CUPED, bootstrap, delta method): **+15.1% BNPL conversion (p < 0.001)** with no guardrail degradation.

DropHunter — money-mule detection in P2P transfers

SQL · scikit-learn · 2026

- SQL features over 1.57M transfers (ASOF JOIN, pass-through), out-of-time validation; boosting: **PR-AUC 0.81 vs 0.36 for rules**, **+46% net benefit**, threshold chosen by economics.

More projects

PyTorch · causal ML · MCP · GitHub Actions

- **Uplift** modeling on an experiment with 64,000 customers (+7.7 pp visits, Qini, IPW) · **TxGPT**, a GPT from scratch in PyTorch · **finpilot**, an MCP server for bank statements · **Market Pulse**, a self-updating Moscow Exchange dashboard.

EXPERIENCE

Developer — Information Committee, Student Council

2024 — present

Financial University, Faculty of IT and Big Data Analytics · Moscow

- Telegram bots for student projects: F&U (channel with 4,000 subscribers) and “Ask the Student Council”, a bot plus Mini App with photo reports, a 27-page FAQ and a campus map with search across ~350 rooms.
- Python (aiogram 3, aiohttp), Mini App signature validation, tests, deployment (nginx, systemd, Docker); event analytics: DAU/MAU, retention, request funnels.

Freelance Python Web Developer

2024 — present

- Turnkey websites on Django/Flask and PostgreSQL; portfolio antonshkel.ru with a lead form, 152-FZ compliance and Yandex Metrica.

Organizing Committee — “Arkadium” Gaming Festival, 200–300 attendees yearly

2024 — present

EDUCATION

Financial University under the Government of the Russian Federation — B.Sc. Software Engineering (09.03.04), 2024–2028.

T-Education (T-Bank), 2025 — SQL, backend · **Yandex Academy**, 2025 — Python, data analysis and visualization · **Alfa-Future Hackathon**, 2026 — team Vibe Security.

SKILLS

Analytics	product metrics, funnels, cohorts, unit economics; A/B testing (SRM, MDE, CUPED, bootstrap, delta method); difference-in-differences
Data	SQL — PostgreSQL, MySQL, DuckDB, SQLite (window functions, CTEs); Python — pandas, NumPy, SciPy, statsmodels; BI dashboards
ML	scikit-learn, gradient boosting, PyTorch (transformers), money-based model evaluation
Programming	Python, SQL, Kotlin, JavaScript, HTML/CSS, Bash
Engineering	Jetpack Compose, Ktor, aiogram, Django, Flask, REST API, WireMock, Docker, nginx, GitHub Actions, Git
Languages	Russian — native; English — B1
